OBJECTIVES

Backend-focused developer and B.Tech (CSE – AI & ML) student focused on building scalable systems and backend infrastructure. Developed projects including a dialect-agnostic SQL engine, real-time streaming systems, and multi-tenant APIs optimized for performance. Passionate about solving engineering problems and leveraging AI-assisted tools to improve developer productivity.

EDUCATION

Reva University, Bengaluru - 2027
B. Tech - Artificial Intelligence & Machine Learning,
Coursework: AI Automations, Operating Systems.

PES Polytechnic, Shivamogga - 2024
Diploma - Computer Science and engineering
Coursework: Cloud Computing, DBMS.

SELECTED PROJECTS

- **Fluxbase - Dual-Engine AI DBaaS Platform | Jun 2025 - Present - Link**
  - Built Fluxbase DBaaS with Next.js and AWS RDS to provision PostgreSQL/MySQL databases dynamically.
  - Created real-time updates using PostgreSQL LISTEN/NOTIFY and WebSockets for instant UI data sync.
  - Built a multi-tenant SQL execution engine routing queries to isolated RDS databases securely.
  - Integrated Google Gemini AI to convert natural language prompts into optimized SQL queries.
  - Integrated Razorpay billing enforcing subscription limits on connections, storage, and database usage.

- **GymTrack Lite - SaaS Gym Management Platform | Jan 2025 - Mar 2025 - Link**
  - Architected a multi-application SaaS platform (Member Hub, Admin, Owner Dashboard).
  - Initially built on Supabase and later migrated to **Fluxbase** for real-time multi-tenant scalability.
  - Implemented low-latency member check-ins, session tracking, and synchronized data streaming.
  - Designed RESTful backend APIs for membership lifecycle management and secure payment processing.
  - Built analytics modules to track user engagement, revenue growth, and operational metrics.

- **PlagiaScan – AI Content Detection Platform | Nov 2025 - Link**
  - Built an AI platform detecting AI-generated content in PDF, DOCX, PPTX, and TXT documents.
  - Integrated a Hugging Face NLP model generating AI probability scores for analyzed text segments.
  - Designed a document pipeline extracting text from multiple formats for automated AI detection.
  - Implemented sentence-level highlighting to flag AI-generated content and generate annotated reports.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript (Node.js), SQL
- **Front-end:** HTML, CSS, Next.js
- **Back-end:** REST APIs, WebSocket, Multi-tenant systems
- **Data Analysis:** NumPy, Pandas, Matplotlib, Power BI
- **Databases:** MySQL, PostgreSQL, Firestore
- **Cloud & Tools:** AWS, Git, VS Code
- **AI tools**: Antigravity, GitHub Copilot, Firebase Studio, Gemini

CERTIFICATIONS

- Python Developer.
- Data Science and Analytics with Python, R, SQL, Power BI - Udemy.
- Full Stack Development using AI - Reva University.
- Prompt Engineering Applications.
