

SUMITH U

Backend Developer | CSE (AI & ML)

+91 8310870493 | sumithu.dev@gmail.com

linkedin.com/in/sumith-u-141b85317 | github.com/Sumith2104

OBJECTIVES

Backend-focused developer building scalable systems and multi-tenant backend infrastructure. Developed a DBaaS platform (Fluxbase) with real-time data sync and query execution across isolated databases. Interested in backend architecture, distributed systems, and practical AI integrations.

EDUCATION

Reva University, Bengaluru - 2027

B. Tech - Artificial Intelligence & Machine Learning,
Coursework: AI Automations, Operating Systems.

PES Polytechnic, Shivamogga - 2024

Diploma - Computer Science and engineering
Coursework: Cloud Computing, DBMS.

SELECTED PROJECTS

• Fluxbase - Dual-Engine AI DBaaS Platform | Dec 2025 - Present - [Link](#)

- Provisioned isolated PostgreSQL/MySQL databases on demand, reducing setup time from hours to under a minute.
- Eliminated data inconsistency by wiring real-time sync through LISTEN/NOTIFY and WebSockets across all clients.
- Multi-tenant SQL engine routing queries across isolated RDS instances - 4ms insert latency, zero cross-tenant leakage.
- Built a NL-to-SQL pipeline with Gemini AI, replacing it with a custom-trained model currently in development.
- Integrated Google and GitHub OAuth for secure user authentication and seamless onboarding across the platform.

• GymTrack Lite - SaaS Gym Management Platform | Jan 2025 - Mar 2025 - [Link](#)

- Architected a multi-tenant SaaS platform with dedicated Member, Admin, and Owner role-based dashboards.
- Migrated core infrastructure from Supabase to **Fluxbase**, improving real-time sync and scalability under load.
- Implemented low-latency member check-ins with real-time session tracking and data synchronization across clients.
- Designed RESTful API managing membership lifecycle, secure payment workflows, and role-based access control.
- Integrated Google OAuth enabling secure role-based login for Members, Admins, and Owners.

• PlagiaScan - AI Content Detection Platform | Nov 2025 - [Link](#)

- Built an AI detection platform identifying AI-generated content across PDF, DOCX, PPTX and TXT formats.
- Integrated a Hugging Face NLP model generating per-sentence AI probability scores for uploaded documents.
- Designed a multi-format document pipeline to extract and preprocess text for automated AI content detection.
- Containerized the BOW vectorization pipeline using Docker for consistent cross-environment deployment.
- Implemented sentence-level highlighting with annotated report generation to flag and visualize AI-written segments.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript (Node.js), SQL, HTML, CSS
- **Back-end:** REST API design, WebSockets, Multi-tenant architectures, SQL query routing
- **Databases:** MySQL, PostgreSQL, Firestore
- **Real-Time Systems:** PostgreSQL LISTEN/NOTIFY, Event-driven updates, State synchronization
- **Cloud:** AWS (RDS, EC2, S3, Lambda)
- **AI Integration:** Gemini (NL to SQL), GitHub Copilot, Antigravity (AI-assisted development)
- **Tools:** Git, VS Code, Docker, PostMan

CERTIFICATIONS

- Python Developer - Udemy
- MLOps Specialization - Udemy
- Data Science and Analytics with Python, R, SQL, Power BI - Udemy
- Full Stack Development using AI - Reva University

ACHIEVEMENTS

- 2000+ GitHub contributions in 2025, building and maintaining Fluxbase, GymTrack, and PlagiaScan end-to-end.
- Built a real-time Sign-to-Caption system at Replit Vibathon, converting hand gestures into live text using CVA.
- Ranked in the top 2% (Under 1500) out of 80,000+ participants in the Amazon ML Challenge.
